

FOR IMMEDIATE RELEASE

Introducing BioWorm™: A Sustainable, Nature-Based Erosion & Sediment Control Solution Offering Both Efficiency and Affordability from Siltworm Inc.

MERRILLVILLE, IN — December 12, 2023

Siltworm Inc., a leading provider of filter sock solutions, proudly unveils its' latest innovation, BioWorm™ – a nature-based erosion and sediment control filter sock solution that sets a new standard for affordable sustainability in the industry.

BioWorm™ delivers up to a 95.7% sediment retention rate, as tested by Tri-Environmental using ASTM testing standards. With nature-based netting and environmentally friendly fill material all at a cost-effective price point, it's the ideal balance of sustainability and affordability in an 8" diameter product format.

Joe Moore, Founder and Chief Brand Ambassador states "At Siltworm Inc., our dedication to innovation and sustainability shines brightly in our exceptional product lines having intercepted more than 20 million pounds of sediment from waterways. With the introduction of BioWorm™, we now have the ability to continue helping keep our waters clean with an even more eco-conscious solution."

BioWorm™ stands as an eco-conscious alternative to traditional filter socks. Its' netting is made from OEKO-TEX ECO PASSPORT certified fibers and textiles that validate Siltworm Inc's commitment to providing sustainable products. Paired with our proven blend of kiln-dried/low-moisture wood material, featuring over 99% reclaimed content, BioWorm™ blends durability, sustainability, and affordability for your erosion and sediment control needs and is available for distributors to pre-order now for first quarter 2024 delivery.

About Siltworm Inc.

Headquartered in Merrillville, IN, with principal manufacturing facilities located in Elkhart, IN Siltworm Inc. distributes its erosion and sediment control solutions nationally through business-to-business channels.

At the heart of their product portfolio, Siltworm™ and BioWorm™, are cutting-edge filter socks primarily designed for safeguarding new residential, commercial, DOT, utility, or industrial construction projects where earth-disturbing activities occur along with uses specified in Storm Water Pollution Prevention Plans (SWPPP). Siltworm Inc products have diverted over 30 million pounds of recyclable materials from landfills and have intercepted more than 20 million pounds of sediment from waterways.

Siltworm Inc. is proud to announce that it ranks No. 3455 on the 2023 Inc. 5000, its annual list of the fastest-growing private companies in America. Additionally, they were ranked No. 39 among other Indiana-based companies on the list and No. 26 among those focused on environmental services.
